

Trust Comes with 25+ Years of Unparalleled Plagiocephaly Treatment

When your patients decide to take the next step with CranialTech, here is what they can expect:

- 1. DSi[®]:** This initial appointment obtains a 3D image of the baby's head, which is used to make their custom DOC Band[®].
- 2. Fit:** Approximately 7–14 days later, the baby will come in for their fit appointment. During this appointment, we will further customize the band, if needed, and discuss wear and care information.
- 3. Adjustments:** We will monitor the progress of the baby weekly or biweekly, depending on the age of the child, and provide growth adjustments.
- 4. Exit:** This final appointment takes a new 3D image of the baby's head, to show improvements achieved with treatment.

Treatment Time Table

Age	Treatment Time*
< 4 months	5-7 weeks
4 months	6-9 weeks
5 months	8-10 weeks
6 months	2.5-3.5 months
7+ months	3.5-4 months

**These treatment times are averages and may vary from baby to baby depending on their individual rate of growth as every baby grows differently.*

Quick Facts

Plagiocephaly is treatable up to 18 months of age and the ideal treatment window is between 4-6 months of age. Early detection and treatment is key for optimal results.

Follow Up Visit Table

Age	Frequency*
3-5 months	once per week
6-11 months	once every 2 weeks
11.5+ months	once every 3 weeks

**Treatment is customized around your baby's needs and may require more or less frequent visits depending on their progress.*

Notes

The majority of babies finish treatment with one band. You and your patient's family will decide together what is the best care for your patient.

Exceptional Results, Comprehensive Care, Easy to Manage, Happy Families

When DOC Band® Treatment is Recommended

The brain grows to 200% of its birth size by 6 months of age, and increases by only an additional 50% in size over the next 24 months.

Persing J, James H, Swanson J, Kattwinkel J; AAP Pediatrics 2003;112:199-202

A baby's natural head growth is important during DOC Band treatment, rapid growth leads to shorter treatment time and optimized outcomes.^{1,2}
